Are you a college or university that has science laboratories, engineering and/or technology laboratories, art studios, or an associated teaching hospital or non-profit research institution?
Are you a state or regional regulator that needs to know more about these new alternative hazardous waste generator regulations?

Then, come to this seminar on the new hazardous waste rule for laboratories at academic institutions and learn how this rule can work for you.

- EPA published the final Academic Laboratories Rule on December 1, 2008. As states adopt the rule and eligible academic entities in those states opt into the rule, very few institutions know the “ins and outs” of the requirements of the regulation. EPA experts on this new regulation and individuals experienced in the development and implementation of Subpart K are hosting this seminar to provide you with information and answer your questions.

Please join us for this important seminar and help us spread the word by passing this invite along!
